Member of:

Watson Brothers, LLC submitted shop drawings cover only the scope of work that we have been contracted to do. Watson Brothers, LLC does not recommend the use of these drawings for final measurements as we do not take any responsibility for errors made based off of these drawings.

Watson Brothers, LLC will comply to all AWI (Edition-2) standards and expects both the General Contractor and Architect to use these standards in any dispute on the project. Once shop drawings and submittals are approved by the the Architect and General Contractor these drawings will take precedence over all other drawings and specifications. Any changes and/or additions made to these drawings must be in writing and may incur an additional cost.

AWI states that material must be stored, installed and maintained in areas with controlled environmental conditions. Relative humidity must be maintained between 25-55% during the project and after installation. Also, the relative humidity must remain within 10 degrees throughout the heating and cooling seasons. Failure to maintain these conditions can negatively affect the wood components of the project and would void any warranties implied or written.
